DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.

Reasons for allowance

2. The following is an examiner's statement of reasons for allowance:

It is noted that the term "fibre-like product" is defined in applicant's specification (para 0009).

The present invention includes independent claims 1 and 6. Claim 1 recites a method in a coating line for a fibre-like product or fibre-like products, especially for an optical fibre or optical fibres, in which the fibre-like product and products are directed from output means to a press head, by means of which a tube is formed around the fibre-like product or the fibre-like products. Claim 6 recites an arrangement in a coating line for a fibre-like product or fibre-like products, especially for an optical fibre or optical fibres, in which the fibre-like product and products are directed from output means to a press head, by means of which a tube is formed around the fibre-like product or fibre-like products.

Nykanen et al (6,534,122) is considered the closest prior art. Nykanen et al teaches a method and arrangement in a coating line for a fibre-like product, especially optical fibre, where the fibre is directed to a press head where previous products are caught between roating rolls.

Nykanen et al does not disclose the claimed combination including:

In claim 1:

the fibre-like product or the fibre-like products are directed from the coating line functioning in the coating process of a previous product or products to a feed unit in a preparatory position at the side, when the coating process of the previous product or products has terminated the feed unit is shifted to the coating line and the fibre-like product or the fibre-like products are fed into the press head and are accelerated to the speed of the tube by means of the feed unit , and the feed unit is detached from the fibre-like product or the fibre-like products , when measurement parameters associated with the fibre-like product or the fibre-like products and/or the tube reach the predetermined values and are shifted back to the preparatory position at the side of the coating line.

In claim 6:

a feed unit provided with a motor-driven roller device and a guide nozzle for the fibre-like product or the fibre-like products arranged to shift from a preparatory position at the side of the coating line to a feeding position on the coating line and back to feed the fibre-like product or the fibre-like products into the press head after the termination of the previous coating process, and measuring means for measuring measurement parameters associated with the fibre-like product or the fibre-like products to control the feed unit.

For these reasons claims 1 and 6 are deemed to be allowable over the prior art of record, and claims 2-5, 7-12 are allowable by dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alain L. Bashore whose telephone number is 571-272-6739. The examiner can normally be reached on about 7:30 am to 5:00 pm (Mon. thru Thurs.).
